chong866-3.rni

```
TELERAX: 415-854-0875
INPORMATION FOR SEQ ID NO: 1011:
SEQUENCE CHARACTERISTICS:
LENGTH: 28 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: DNA
FRANTURE:
COTHER INFORMATION: oligonucleotide primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             J3, Appl

Sequence 5, Application US/08486953A
Patent No. 5649290
GENERAL INFORMATION:
APPLICANT: Brown, Robert
APPLICANT: Rosen, Daniel R.
TITLE OF INVENTION: TREATMENT AND PREVENTION OF DISEASES OF CELL DEATH
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESS:
ADDRESSEE: Clark & Elbing LLP
STREET: 176 Federal Street
                                                                                                                             GENERAL INFORMATION:
APPLICANT: Brown, Robert
APPLICANT: Horvitz, H. Robert
APPLICANT: Rosen, Daniel R.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR THE DIAGNOSIS,
TITLE OF INVENTION: TREATMENT AND PREVENTION OF DISEASES OF CELL DEATH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 21;
                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/023,980B
FILING DATE: 26-FEB-1993

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
       Sequence 7, Application US/08486953A

Sequence 7, Application US/08486953A

Patent No. 5849290

GENERAL INFORMATION:
APPLICANT: Brown, Robert
APPLICANT: Rosen, Daniel R.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR THE DIAGNOSIS,
TITLE OF INVENTION: COMPOUNDS AND PREVENTION OF DISEASES OF CELL DEATH
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESS:
ADDRESSEE: Clark & Elbing LLP
STREET: 176 Federal Street
CITY: Boston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 7, Application US/08204052

Sequence 10, Application US/08204052
Patent No. 6723893
GENERAL INFORMATION:
APPLICANT: Brown, Robert
APPLICANT: Rosen, Daniel R.
TITLE OF INVENTION: TREATMENT AND METHODS FOR THE DIAGNOSIS,
TITLE OF INVENTION: TREATMENT AND PREVENTION OF DISEASES OF CELL DEATH
NUMBER OF SEQUENCES: 53
CORRESPONDENCE ADDRESSE: Fish & Richardson P.C.
STREET: 225 Franklin Street
                                                  Gaps

Sequence 27, Application US/09545686

Patent No. 6441273

GENERAL INFORMATION:

APPLICANT: Aldwincle, Herbert S.

TITLE OF INVENTION:

TITLE REFERENCE: 19603/331

FILER REFERENCE: 19603/331

PRIOR PPLICATION NUMBER: 06/180,934

PRIOR FILING DATE: 2000-02-08

NUMBER OF SEQ ID NOS: 40

SOFTWARE: Patentin Ver. 2.1

LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 102, Application US/08412614

Patent No. 5536638
GENERAL INFORMATION:
APPLICANT: Rossau, Rudi
APPLICANT: Van Heuverswyn, Hugo
TITLE OF INVENTION: Hybridization Probes Derived from the
TITLE OF INVENTION: Spacer Region Between the 16S and 23S rRNA Genes for the
TITLE OF INVENTION: Detection of No. 5536638-Viral Microorganisms
NUMBER OF SEQUENCES: 104

Patent No. 6346398

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Pavco, Pamela
APPLICANT: Pavco, Pamela
APPLICANT: Exinchcomb, Dan T.
APPLICANT: Escobedo, Jaime
TITLE OF INVENTION: METHOD AND REAGENT FOR THE
TITLE OF INVENTION: CONDITIONS RELATED TO LEVELS
TITLE OF INVENTION: OF VASCULAR ENDOTHELIAL
TITLE OF INVENTION: GROWTH FACTOR
MUMBER OF SEQUENCES: 8502
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         6; Mismatches

Patent No. 5616488

GENERAL INFORMATION:

APPLICANT: Braper, Kenneth G.

APPLICANT: McSwiggen, James

APPLICANT: McSwiggen, James

TITLE OF INVENTION: RIBOZYME TREATMENT OF DISEASES

TITLE OF INVENTION: OR CONDITIONS RELATED TO LEVELS

TITLE OF INVENTION: OF LL-5

NUMBER OF SEQUENCES: 751

CORRESPONDENCE ADDRESS:

STREET: 633 West Fifth Street

STREET: LOS ANGELSE

CITY: LOS ANGELSE

STREET: Suite 4700

CITY: LOS ANGELSE

STATE: California

Sequence 1, Application US/0909907

Patent No. US20020106348A1

GENERAL INFORMATION:

APPLICANT: HUNKETT, WILLIAM

APPLICANT: FENG, LI

TITLE OF INVENTION: C-METHOXYESTRADIOL AND AN ACENT THAT INCREASES

TITLE OF INVENTION: INTRACELLULAR SUPEROXIDE ANION

FILE REFERENCE: UFSC: 61808

CURRENT APPLICATION NUMBER: US/09/899,807

CURRENT APPLICATION NUMBER: US/09/899,807

CURRENT PILING DATE: 2001-07-05

NUMBER OF SEQ ID NOS: 6

SOFTWARE: Patentin Ver: 2.1

LENGTH: 27

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence A Application US/09899807

Patent No. US20020106348A1

GENERAL INFORMATION:

APPLICANT: HUNG, PENG

APPLICANT: HUNGETT, WILLIAM

APPLICANT: FENG, LI

TITLE OF INVENTION: CANCER THERAPEUTICS INVOLVING THE ADMINISTRATION OF

TITLE OF INVENTION: LINTRACELLULAR SUPEROXIDE AND AN AGENT THAT INCREASES

TITLE OF INVENTION: 1NTRACELLULAR SUPEROXIDE AND AN AGENT THAT INCREASES

TITLE OF INVENTION: 2-METHOXYESTRADIOL AND AN AGENT THAT INCREASES

TITLE OF INVENTION: 2-METHOXYESTRADIOL AND AN AGENT THAT INCREASES

TITLE OF INVENTION: 2-METHOXYESTRADIOL AND AN AGENT THAT INCREASES

TITLE OF INVENTION: 2-METHOXYESTRADIOL AND AN AGENT THAT INCREASES

CURRENT APPLICANT 2-METHOXYESTRADIOL AND AN AGENT THAT INCREASES

CURRENT PILING DATE: 2-2001-07-05

SOFTWARE: PATENT OF SEQ ID NOS: 6

SOFTWARE: PATENT IN Ver. 2.1

SEQ ID NO 4

LENGTH: 23
                                                                                                                                                                                                                                                                                                                                                                                                                                      TITLE OF INVENTION: CANCER THERAPEUTICS INVOLVING THE ADMINISTRATION OF TITLE OF INVENTION: 2 METHICXYESTRADIOL AND AN AGENT THAT INCREASES TITLE OF INVENTION: 2 METHICXYESTRADIOL AND AN AGENT THAT INCREASES TITLE OF INVENTION UNRACELLULAR SUPEROXIDE ANION FILE REPERENCE: UTSC::6180S
